EDUCATION

The University of Akron — Akron, Ohio

Expected July 2026

Bachelor of Science in Computer Information Systems--Software Development | GPA: 3.0

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, C++, SQL, HTML5, CSS3
- **Frontend:** React, Tailwind CSS
- **Backend:** FastAPI, REST API design, JWT authentication
- **Databases:** PostgreSQL, SQLAlchemy ORM
- **Tools:** Git, GitHub, VS Code

EXPERIENCE

Undergraduate Research Assistant — Cyber Forensics

May 2026 – July 2026

- Contributing to the development and testing of digital investigation tools used to analyze cybersecurity incidents and process forensic evidence.
- Supporting the collection, preservation, and analysis of digital evidence following standard forensic procedures to maintain integrity and chain of custody.
- Assisting a faculty-led cyber forensics summer camp by preparing technical presentation materials and demonstrations for high school students.

PROJECTS

Tournament Management Platform

React · TypeScript · Python · FastAPI · PostgreSQL · SQLAlchemy ORM · Tailwind CSS · REST API

- Built a full-stack web application with a React 18 and TypeScript frontend, Python FastAPI backend, and PostgreSQL database, letting users create and manage sports tournaments, leagues, and pickup games with automated scheduling.
- Designed and developed a RESTful API with 15+ endpoints supporting full CRUD operations, JWT authentication, bcrypt password hashing, and SQLAlchemy ORM, ensuring secure data access and reliable user session management.
- Implemented core algorithms including a binary-tree-based bracket generation for single-elimination tournaments, and a round-robin scheduler for automated league fixtures.

Personal Portfolio Website

React · Tailwind · TypeScript · Responsive Design

- Designed and built a personal portfolio website from scratch with React and Tailwind to showcase projects, skills, and contact information in a clean, organized layout.
- Added interactivity with DaisyUI and applied responsive styling so the site adapts across desktop and mobile screen sizes.

Can I Go Undefeated? — NBA Season Simulator

React · TypeScript · Tailwind CSS · DaisyUI · Client-Side Simulation

- Built a client-side React and TypeScript web game where users assemble cross-era NBA rosters and attempt an undefeated 82–0 season, with all simulation logic running in the browser.
- Engineered a per-game simulation engine using a logistic sigmoid for win probability and a Box-Muller normal distribution for score generation, producing realistic results that cluster around ~105 points with ~8-point variance.
- Designed a star-weighted player-grade rating system (offense from scoring, playmaking, athleticism, and IQ; defense from defense, rebounding, and IQ) and a tiered schedule generator with randomized opponent strengths, yielding outcomes where elite rosters win 65–75 games and weaker rosters 40–50.
